

Kumppanikauko RDP-ongelmien ratkaisua

RDP-clientin (mstsc.exe) asetukset löytää:

.rdp -tiedosto on yleensä käyttäjän Documents -hakemistossa, mutta piilotettuna.

Komento:

```
dir *.rdp /s /a
```

löytää tiedoston

Default.rdp

Komento:

```
attrib -h Default.rdp
```

Antaa oikeudet katsella ja muokata tiedostoa.

Yleensä ongelma on:

Windows7-työasemissa

RDP-yhteyksissä Network Level Authentication ei saa olla päällä jotta RDP toimisi oikein.

Tähän on korjauksena:

“To configure Network Level Authentication for a connection

1. On the RD Session Host server, open Remote Desktop Session Host Configuration. To open Remote Desktop Session Host Configuration, click Start, point to Administrative Tools, point to Remote Desktop Services, and then click Remote Desktop Session Host Configuration.
2. Under Connections, right-click the name of the connection, and then click Properties.

3. On the General tab, select the Allow connections only from computers running Remote Desktop with Network Level Authentication check box.

If the Allow connections only from computers running Remote Desktop with Network Level Authentication check box is selected and is not enabled, the Require user authentication for remote connections by using Network Level Authentication Group Policy setting has been enabled and has been applied to the RD Session Host server.

4. Click OK.”

Ja jos ei tämä auta niin sitten

Disable NLA for RDC

Open regedit

Under HKLM\SYSTEM\CurrentControlSet\Control\Lsa

Edit the REG_MULTI_SZ value named Security Packages and remove tspkg from the list

Under HKLM\SYSTEM\CurrentControlSet\Control\SecurityProviders

Edit the REG_SZ value named SecurityProviders and remove from the end of the list

, credssp.dll

Use the mstsc About dialog to check NLA has been disabled.

Entirely remove any credsspsupport:i: entry which is present in the .rdp file

Users can save their passwords

Note: Windows 7 has NLA enabled by default and there may be no way for users to save RDC credentials.
